a local water budget that shows expected income (precipitation), outgo (evapotranspiration), and savings (soil storage of water). With such a budget, a community can plan its use of water. As we will see in this chapter, the water budget of a region is also useful in describing or classifying its climate.

Understanding Water Budgets and Balances : What is a water budget? A water budget reflects the relationship between input and output of water through a region. The water balance graph shows precipitation and potential evapotranspiration both as line graphs. Thus we have a direct comparison of supply of water and the natural demand for water.
