Lcd Native Resolution

Native resolution. The native resolution of a LCD, LCoS or other flat panel display refers to its single fixed resolution. As an LCD consists of a fixed raster, it cannot change resolution to match the signal being displayed as a CRT monitor can, meaning that optimal display quality can be reached only when the signal input matches...

Native resolution - Wikipedia

The number of pixels in an LCD results in its native resolution – for example, a laptop with a 1366×768 resolution has 1366×768 pixels. Image Credit: Ryan Tir on Flickr. When an LCD monitor runs in its native resolution – 1366×768 in the example above — each pixel on the LCD corresponds to a pixel in the image sent by your computer's video card.

Why You Should Use Your Monitor's Native Resolution

LCD Native Resolution. Does a CRT set to 1280 X 1024 look the same as if it were on a LCD ? For those who use an LCD with a native resolution of 1280 X 1024 what do you have your resolution set at for normal regular use ? (non game) On my 17 inch CRT I have it set to 800 X 600 and I like it that way.

LCD Native Resolution - Dell Community

The LCD's fixed-pixel display automatically scales up the lower screen resolution it to fit onto its 1600 x 1200 native resolution screen. The enlarged 1280 x 960 pixels now cover the full screen. Yes, images, text, and icons will look bigger. But the scaled pixels are mismatched in size with the actual screen pixels.

LCD HDTV RESOLUTIONS EXPLAINED. Some HDTV broadcasts are 1080 interlaced lines of resolution or 1080i, and some are 720 progressive lines of resolution or 720p. Which is better is a long debated, matter of opinion and depends somewhat on what type of TV you have and your HD reception.

LCD HDTV RESOLUTIONS EXPLAINED - lcdtvbuyingguide.com

Native resolution is typically the maximum display resolution, and HP recommends using LCD displays at the native resolution. Fixed matrix display uses the number of pixels required for a certain resolution exclusively and typically results in a border or framing effect, but the image size remains unchanged.

HP LCD Displays - Changing the Screen Resolution | HP ...

It is actually pretty simple. Every projector that uses microdisplays, whether they are LCD panels, or DLP or LCOS chips, has a fixed array of pixels on those microdisplays. That fixed array of pixels is known as the native resolution of the projector. So native resolution is the actual, true, physical resolution of the projector.

Projector Resolution -- Native vs. Maximum

To additionally clarify, the pixels on LCD/LED/OLED displays are fixed in position. If the resolution is lower than the native resolution, and it's stretched to fill the screen, those pixels don't move to take up the extra space.
