SOLUTION OF LINEAR PROGRAMMING PROBLEMS THEOREM 1 If a linear programming problem has a solution, then it must occur at a vertex, or corner point, of the feasible set, S , associated with the problem. Furthermore, if the objective function P is optimized at two adjacent vertices of S , then it is optimized at every point on the line segment joining

Methods of solving inequalities with two variables, system of linear inequalities with two variables along with linear programming and optimization are used to solve word and application problems where functions such as return, profit, costs, etc., are to be optimized.

Linear Programming: Word Problems and Applications

Solving Linear Programming Problems. Now, we have all the steps that we need for solving linear programming problems, which are: Step 1: Interpret the given situations or constraints into inequalities. Step 2: Plot the inequalities graphically and identify the feasible region. Step 3: Determine the gradient for the line representing the solution (the linear objective function).
