A laser is a device that emits light (electromagnetic radiation) through a process called stimulated emission. The term "laser" is an acronym for Light Amplification by Stimulated Emission of Radiation. Laser light is usually spatially coherent, which means that the light either is emitted in a narrow, low-divergence beam, or can be converted into one with the help of optical components such as ...

(a) The laser beam has only a slightly larger diameter at 10m distance from the laser and the laser power is of the order of 1W. (b) Assuming that the luminescence radiation is emitted isotropically, the power reaching an area of 1cm diameter is  $P \sin^2 \theta$ , where  $\theta$  is the angle corresponding to the area. It follows that  $\theta \approx 0.04$  ...
