### **Isle Royale Population Study Answer**

Among healthy, outbred populations LSTV occurs in one out of a 100 wolves. On Isle Royale, a third of the wolves suffered from this malformity. Not only did Isle Royale wolves exhibit LSTV at a high rate, but the rate of malformities had once been relatively low and increased over the decades, as the population became increasingly inbred.

### **The Population Biology of Isle Royale Wolves and Moose: An ...**

The wolves of Isle Royale face a decrease in genetic diversity from isolation. Due to a lack of more alleles in the gene pool and the severe lack of females in the pack, wolf in-breeding is a common practice on Isle Royale. This leads to genetic mutations in their spine, and a lower life expectancy.
