It is usually used in aqueous solution, which can be made weaker with water. No other fluid would really be appropriate for diluting it. Caustic soda is highly caustic and requires care in handling.

Production. Solid sodium hydroxide is obtained from this solution by the evaporation of water. Solid sodium hydroxide is most commonly sold as flakes, prills, and cast blocks. In 2004, world production was estimated at 60 million dry metric tonnes of sodium hydroxide, and demand was estimated at 51 million tonnes.

The only thing I have come up with so far is that the alcohol is changing the water's ability to dissolve the baking soda and that when a slight jolt is added to the system the baking soda is dislodged out of solution long enough for the vinegar to attack it, but that is just a guess.

Sodium carbonate. It acts as an alkali because when dissolved in water, it dissociates into the weak acid: carbonic acid and the strong alkali: sodium hydroxide. This gives sodium carbonate in solution the ability to attack metals such as aluminium with the release of hydrogen gas.

Caustic soda is an essential ingredient in many industrial and commercial applications. It is a strong, colorless alkali. Caustic soda is manufactured through the electrolysis of sodium chloride (salt brine). Westlake Chemical produces liquid caustic soda as 50% and 73% solutions in water. Intravenous sodium bicarbonate is an aqueous solution that is sometimes used for cases of acidosis, or when insufficient sodium or bicarbonate ions are in the blood. In cases of respiratory acidosis, the infused bicarbonate ion drives the carbonic acid/bicarbonate buffer of plasma to the left and, thus, raises the pH.

Soda pop is a solution of solid sugar, liquid water and carbon dioxide gas. The properties of solutions are best understood by studying solutions with liquid solvents. When water is the solvent, the solutions are called aqueous solutions. In aqueous solutions, dissolved material often separates into charged components called ions.
