The weighted average takes into account both the mass and relative abundance of each isotope as it occurs in nature. Purpose: In this lab you will determine the average atomic mass of the fictitious element beanium, Bn, from a mixture of three naturally occurring isotopes with different masses.

### CHEMISTRY LAB: ISOTOPES AND ATOMIC MASS

From this data you will calculate the average mass of each isotope and the weighted average atomic mass of the element Beanium. Unlike real isotopes, the individual isotopic particles of Beanium differ slightly in mass, so you will determine the average mass of each type of isotopic particle.

### Isotopes and Atomic Mass Lab, or Beanium Lab

LAB: VEGIUM (Isotopes and Average Atomic Mass) Introduction: Isotopes are atoms of the same atomic number having different masses due to different numbers of neutrons. The atomic mass of an element is the weighted average of the masses of the isotopes of that element. The weighted average takes into account both the mass and relative abundance ...
