Lipid Worksheet Worksheet for 9th - Lesson Planet

Explain why a steroid is considered a lipid. Even though steroids form rings and lipids are mostly found in chains, they are still considered lipids. This is because steroids are composed of molecules that contain polar and nonpolar ends. As a result, they are water insoluble.

Lipids Answer Key - HelpTeaching.com

Lipids in general are molecules with a large non-polar extension, making them soluble in non-polar solvents, such as benzene, ether and chloroform. There exist some amphipathic lipids, which are lipids with both a hydrophilic portion, which gives them the property of water-solubility, as well as a hydrophobic portion, which is non-polar.
