MCQ on Ecology & Ecosystem Test Questions | easybiologyclass

Chapter Self-Test Teaching Links. Sunlight is the main energy source for life on Earth. In a few ecosystems, some organisms rely on the energy stored in inorganic chemical compounds. Energy flows through an ecosystem in one direction, from the sun or inorganic compounds to autotrophs (producers) and then to various heterotrophs (consumers).

Chapter 3 Resources - BIOLOGY by Miller & Levine

Energy flows through an ecosystem in one direction from primary producers to various consumers. A food chain is a series of steps in which organisms transfer energy by eating and being eaten. Producers, such as floating algae called phytoplankton, are at the base of every food chain. A food web is a network of all the food chains in an ecosystem.
