Chapter 8: The Logic of Conditionals § 8.1 Informal methods of proof Conditional elimination This method of proof is also known by its Latin name, modus ponens (literally, "method of affirming"—roughly, having affirmed the antecedent of a conditional, you may affirm the consequent). From P and P → Q , you may infer Q.

Help with a LPL proof question, please? submitted 2 years ago by [deleted] Hi guys! I'm taking an intro class to logic and I'm currently using the Language, Proof, and Logic textbook by Barwise and Etchemendy. I'm stuck on exercise 6.30, and I can't seem to figure out what I'm doing wrong. This is the question:

### Help with a LPL proof question, please? : logic - reddit
some step in the proof went wrong, that is, that there is a sentence in the proof that is not a tautological consequence of the premises. Suppose there is such a sentence, call it Q. Q is derived from some prior sentences by one of our inference rules. So now we have a proof by cases. In each case suppose one of the inference rules was responsible

I haven't had an issue with any of the other questions in this chapter, but this one is really throwing me for a loop. I suppose my issues are caused by carl and max (not nice guys, apparently). I tried finding hints and solutions on the internet, but I couldn't find a solution nor something helpful enough anywhere.
